

Chambered Doctor Blade Systems for Flexographic Applications

Harris & Bruno's Chambered Doctor Blade System continues to provide state-of-the-art technology to the ever-changing flexo industry.

Armed with a variety of platforms, H&B's chambered doctor blade system offers the solution for processes demanding higher press speeds, thicker inks & coatings and more frequent color changes.

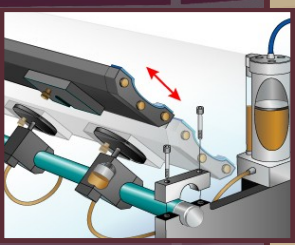

With several levels of automation available, Harris & Bruno has the right system for the right job! For more than 60 years, H&B has served as a leader in the flexographic industry.

Our flexographic customers print films, foils, corrugated boxes, paperboard, folding cartons, envelopes, labels, poly bags and lottery tickets.

Chances are, if it's printed flexo someone is doing it with a Harris & Bruno Chambered Doctor Blade System!

Tilt Mechanism

- Allows for quick blade & seal changes
- A convenient way to manually tilt the system back away from the anilox roll
- On very large or heavy systems, an optional air-assisted tilt mechanism is provided

Custom Mounting Design

- Easily & quickly remove entire assembly
- Allows for chamber interchangeability

Different Levels of Automation

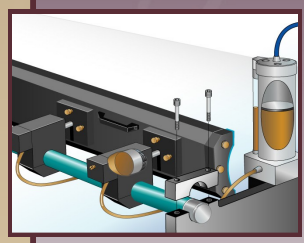

Depending on the application, the H&B Chambered Doctor Blade System offers various levels of automation. From our "tool-less" blade clamps to our IDS pumping system or our fully automated RapidWash™ System, we can custom design a system that best suits your needs.

Cavity Design

Whatever the situation, our cavity designs can accommodate most any application – from the highly viscous inks & coatings to the troublesome issues of foaming cell starvation & ghosting. Our patented HiFlow Chamber Technology promotes efficient replenishment of anilox cells with less aeration of ink/coating. HiFlow benefits include increased press speeds, quicker wash-ups and reduced end seal leakage.

Hydrocomp™ Linear Loading

- Combines the rigidity of a mechanical system with automatic compensation for blade wear
- Maintains a uniform blade angle
- Increases blade life over mechanically loaded systems
- Industry's most advanced blade-loading technology
