

SwiftClean Coated Pans and Troughs

Reduce Downtime and Improve Throughput

SWIFT CLEAN
by Harris & Bruno

Most H&B chamber systems utilize a coating trough as part of the fluid circulation process. The new H&B SwiftClean Trough is coated with a nonstick material that allows for reduced downtime and improved throughput versus traditional chamber troughs. Benefits Include:

- ◆ **Faster Cleanup Due to Less Coating Sticking**
SwiftClean helps your pan or trough release any clinging materials
- ◆ **Less Cross Contamination of Coatings**
Better clean up means less chance of cross contamination and clogging
- ◆ **Easier Cleanup**
SwiftClean treated pans and troughs reduce the hard scrubbing for dried coatings
- ◆ **Reduced Cleanup Means More Throughput**
Spend less time cleaning and more time coating
